QMatch is an advanced payment and transaction processing platform tailored for banks and financial institutions. Built on Microsoft technology, it integrates terminal management, transaction handling, and real-time reporting into a unified, scalable system.

Key Benefits

Integrated Solution

Unifies all terminals with centralized management.

Robust Security

Features biometric authentication, OTP verification and secure API middleware.

Real-Time Monitoring

Tracks terminal up-time and hardware active status.

Modular Design

Supports scaling and customization based on operational needs.

Features & Capabilities

QManager Dashboard

Unifies all terminals with centralized management.

QKenekt

Real-time video calling module for customer support.

Scalable Deployment

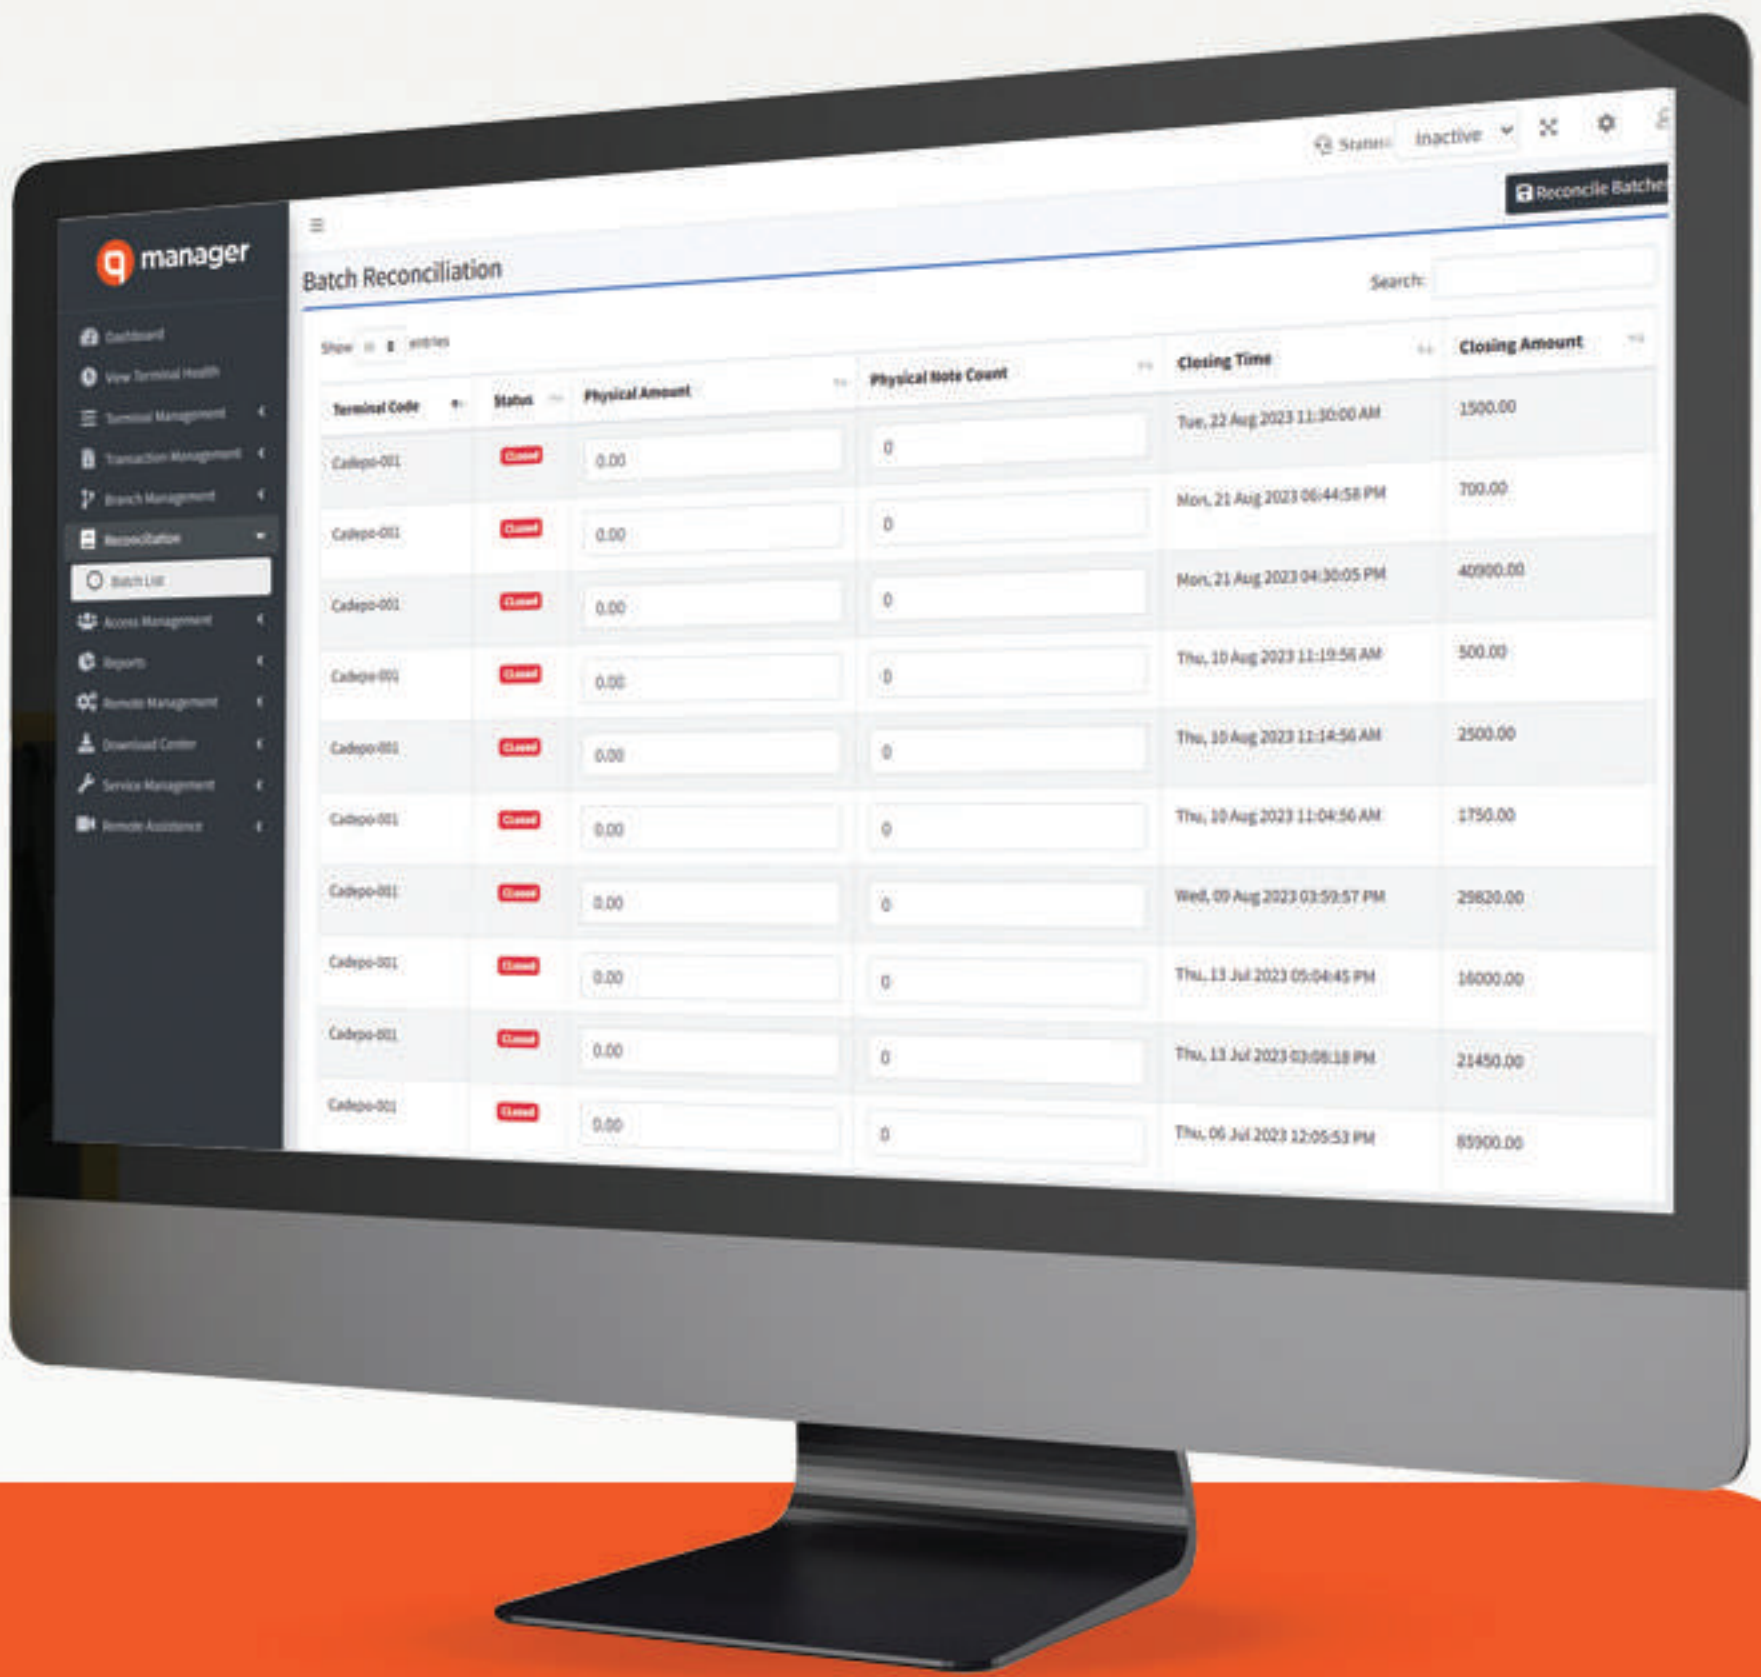

Deployable on-premises or as a hosted model.

Transaction Processing

Streamlined handling of cash and cheque deposits via API middleware.

QReports

SQL-based insights with customizable reports.

Technical Highlights

- ✓ Built on Microsoft Technologies for efficiency and scalability.
- ✓ Integrates seamlessly with core banking systems via RESTful APIs.
- ✓ Equipped with Microsoft SQL Server for robust data management.
